The type initializer for ResourceMate.Core.ApplicationProfile threw an exception

This article pertains to the New ResourceMate Family of Products

This error message happens as a result of permissions issues with the ResourceMate folder.

For Windows 7 (Vista) the folder is C:\programdata\resourcemate. An administrator needs to right click on this folder, choose Properties, Security, Edit and give "Users" Full control.

For Windows XP Professional the folder is C:\Documents and Settings\All Users\Application Data\ResourceMate. An administrator needs to right click on this folder, choose Properties, Security, Advanced, Edit and give "Users" Full control.

This **type** of message can also happen if the profile_folder_list.xml file in those folders is empty. Contact Jaywil Software if this is the case.
